### **Biographical Data**

Dr. Arthur Laganowsky obtained his Ph.D. in Chemistry and Molecular Biology from the University of California, Los Angeles in 2011. His doctoral work under the mentorship of Professor David Eisenberg received the biochemistry distinguished dissertation award. He then pursued postdoctoral studies in the laboratory of Professor Dame Carol V. Robinson at the University of Oxford, and soon after arriving became a Nicholas Kurti Junior Research Fellow of Brasenose College. Dr. Laganowsky joined the IBT within Houston's Texas Medical Center as an assistant professor and director of the Waters Collaboratory for the Analysis of Membrane Proteins in 2014. He also held a joint appointment in Texas A&M Department of Chemistry, which he joined full-time in January 2017. Dr. Laganowsky's research focuses on membrane protein-ligand interactions and how these interactions modulate membrane protein structure and function. His research lies at the unique interface between native mass spectrometry and X-ray crystallography. Dr. Laganowsky has an exceptional record of accomplishments and publications. He has filed a number of patents at UCLA, University of Oxford, and Texas A&M University, written 38 publications, with a number published in high-impact journals, three book chapters, and invited to numerous talks. Dr. Laganowsky has received nearly \$2.3 million in direct research funding. He is also a recipient of the prestigious NIH New Innovator Award in 2016, representing the first recipient of this award at Texas A&M University.
